

Plastic cards can be used in any number of different ways, be it as customer cards for marketing, or as tickets for events. PAV can supply you with plastic cards in your design, with magnetic stripes, or with an integrated chip (see 'Chip cards'). We can even supply special-format cards, in the shape of a pyramid, for example.

Plastic cards are available with gloss or matt surfaces. Besides PVC, we also use materials such as polycarbonate, which makes the cards particularly resistant to heat, and to wear and tear.

These customised features are made possible with sophisticated printing techniques. Offset printing is particularly suitable for print runs of 1,000 cards or more. With the aid of a digital printing method specially developed by PAV, smaller print runs can also be done cost efficiently – including personalisation and encoding of the cards as part of our comprehensive card service.

If so required, we can ship the cards to your customers through our lettershop. To ensure that the respective sports ID card reaches the right recipient, for example, each card is compared with the assigned address before being enveloped.
